HIGH END SKIN BOOSTER

DMP PLUS

GANA DMP+ is an advanced, high-end skin booster meticulously formulated to deliver a comprehensive skin rejuvenation experience.

Ingredients

・Poly-L-lactic Acid (PLLA) : 10mg/ml
・Hyaluronic Acid : 3mg/ml
・Glutathione : 0.5mg
・Polydeoxyribonucleic Acid (PDRN) : 2 mg/ml
・Prefilled vial : 3 ml

Product Feature

・Volume : 3ml prefilled vial
・Usage : Skin Booster
・Key Characteristic : Ready-to-use; no reconstitution required

Product Description for GANA DMP+

GANA DMP+ is an advanced, high-end skin booster meticulously formulated to deliver a comprehensive skin rejuvenation experience.
It targets key areas of skin health: collagen stimulation, hydration, cell regeneration, and skin brightening, providing noticeable and long-lasting results with minimal effort.

Product Highlights

Concentration
The 3ml prefilled vial is crafted with carefully balanced ingredients, specifically optimized for skin health without requiring additional mixing or reconstitution.

High-Performance Ingredients
Each component serves a unique purpose, working synergistically to revitalize, hydrate, and brighten the skin.

Key Ingredients and Actions

Poly-L-Lactic Acid (PLLA) - 10mg/ml

PLLA acts as a powerful collagen stimulator, initiating a natural regenerative process that gradually enhances skin elasticity, firmness, and smoothness by boosting collagen production. This ingredient is particularly effective for long-term improvement in skin density and structure.

Hyaluronic Acid - 3mg/ml

The cross-linked hyaluronic acid provides deep hydration, helping the skin retain moisture and maintain a plump, youthful appearance. Its high molecular weight ensures it reaches deep into the skin layers, supporting immediate hydration and a softening effect.

Polydeoxyribonucleic Acid (PDRN) - 2mg/ml

This DNA-based component is known for its regenerative properties, encouraging cellular repair and turnover. It revitalizes skin cells, aids in wound healing, and contributes to the overall texture and resilience of the skin by enhancing skin's repair mechanisms.

Glutathione - 0.5mg

Known as a potent antioxidant and skin brightener, glutathione plays a significant role in skin lightening by inhibiting melanin production. It provides a visible radiance and helps in reducing the appearance of age spots, pigmentation, and uneven skin tone.

Benefits of GANA DMP+

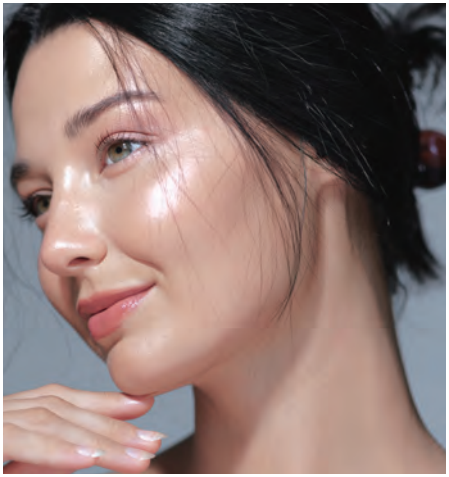

Longevity

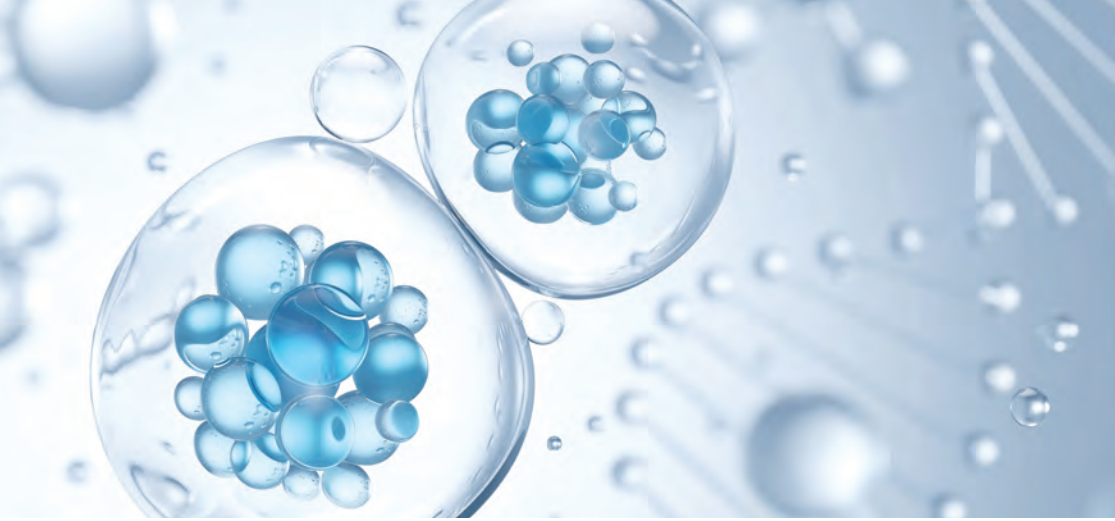

This formula offers results that last up to 6 months, making it a highly effective choice for long-term skin enhancement and maintenance.

Comprehensive Rejuvenation

By combining collagen synthesis, hydration, cellular repair, and skin brightening, GANA DMP+ addresses a broad spectrum of skin concerns in a single treatment.

Ready-to-Use Formulation: The prefilled 3ml vial requires no additional preparation, ensuring quick and efficient application.

Application Instructions

Preparation
Draw the entire 3ml solution into a 3ml syringe for accurate dosing.

Injection Layer
Administer the product into the dermis layer to achieve optimal results, as it is specifically formulated for this depth.

Method
For precision, use a mesotherapy gun set to a depth of 1.5mm. This allows for even distribution and minimizes the risk of creating papules in the epidermis.

Precautions
Avoid injecting into the epidermis to prevent surface papule formation. Ensure aseptic techniques to reduce the risk of infection and irritation.

Ideal Candidates

GANA DMP+ is suited for individuals seeking a non-invasive yet highly effective solution to improve skin elasticity, hydration, and brightness, and it is particularly beneficial for clients interested in achieving a comprehensive rejuvenation effect without undergoing extensive procedures.

Competitive Edge

	GANA DMP +	JU******	RE******
Regeneration by PDRN, PN	+	-	+
Collagenesis by PLLA	+	+	-
Moisturization by HYALURONIC ACID	Cross linked HA-last 6 months	Non cross linked HA-last 2 weeks	Non cross linked HA-last 2 weeks
Dissoluton needed	No need pre mixed Immediate use	Need dissolution	No need
Whitening by glutathione	+	-	-

Compared to other skin boosters, GANA DMP+ offers an enhanced formula with a unique combination of PLLA for deep collagen stimulation and PDRN for cellular regeneration. Its ease of use, combined with the enduring results, sets it apart as a premium choice for skin rejuvenation in professional skincare settings.

GANA DMP+ represents an ideal blend of scientific innovation and luxury skincare, making it a standout option for those looking to achieve and maintain visibly youthful, luminous skin.

The key differences between GANA DMP+, Juvelook, and Rejuran in terms of skin rejuvenation features and functionality

1.Regeneration by PDRN/PN:

GANA DMP+ and Rejuran both promote skin regeneration through PDRN (polyde oxyribonucleotide) and PN (polynucleotide), which aid in skin repair and cellular renewal. Juvelook does not include PDRN or PN for regeneration.

2.Collagenesis by PLLA:

Both GANA DMP+ and Juvelook stimulate collagen production using PLLA (Poly-L-Lactic Acid), which enhances skin elasticity and firmness. Rejuran does not include PLLA for collagen synthesis.

3.Moisturization by Hyaluronic Acid:

GANA DMP+ uses cross-linked hyaluronic acid, providing hydration that lasts up to 6 months, ensuring prolonged skin moisture retention.
Juvelook and Rejuran both use non-cross-linked hyaluronic acid, which offers a shorter-lasting hydration effect of approximately 2 weeks.

4.Dissolution Requirement:

GANA DMP+ is pre-mixed and ready for immediate use, so it does not require any dissolution before application, making it more convenient.
Juvelook requires dissolution before it can be used.
Rejuran also does not require dissolution, but it's not pre-mixed like GANA DMP+.

5.Whitening by Glutathione:

GANA DMP+ includes glutathione, which provides skin-brightening effects, helping to improve the skin's tone and reduce pigmentation.
Neither Juvelook nor Rejuran contain glutathione for whitening benefits.

In summary, GANA DMP+ offers a unique blend of skin regeneration, long-lasting hydration, collagen stimulation, and whitening, making it a comprehensive solution. Its ease of use (no need for dissolution) and prolonged effects (up to 6 months of hydration) distinguish it from Juvelook and Rejuran, which offer shorter-lasting hydration and lack the skin-brightening benefits of glutathione.
