GANA HA

Experience the Natural Radiance of GANA RAINBOW Cosmetics – Crafted with GANA HA and Pure Ingredients.

01

High cross linking ratio

It has a 10% cross linking ratio, which is higher than other products with 6-8% monophasic and 2-4% biophasic.

02

High HA concentration

It has a high HA concentration of 20-24mg/cc.

03

Small particle size

It has small particle size so that doctors are easy to mold shape.

04

Low extruding force

It ensures a smoother, more precise application, enhancing its effectiveness and providing superior, natural-looking results.

05

Long duration

It has maintenance period of 12-18 months.

Specification

GANA HA		
Cross linking ratio %	10%	
HA concentration (mg/cc)	20 – 24 mg/cc	
Cross linking agent	BDDE	
Duration month	12-18	
Particle size	200-500µm	
Recommended guage	27G	

GANA HA - RED

GANA HA TYPE + Anthocyanins

Patent Application Number
10-2024-0105118

What is Anthocyanins

Anthocyanins found in the flowers and fruits of many plants, offer a multitude of benefits. Anthocyanins exhibits antioxidant effects.

Shape : Red viscous gel form

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Anthocyanins

GANA HA - YELLOW

GANA HA TYPE + Gardenia

Patent Application Number
10-2024-0105119

What is Gardenia

Gardenia is derived from the Gardenia flower. Gardenia exhibits antioxidant, anti-inflammatory, and hypoglycemic effects.

Shape : Yellow viscous gel form

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Gardenia Fruits extract

GANA HA - BLUE

GANA HA TYPE + Copper peptide

Patent Application Number
10-2024-0105116

What is Copper peptide

Copper peptide is compounds that consist of small protein fragments bound to copper ions.

Copper peptide offer comprehensive benefits, enhancing wound healing with improved wound contraction, faster granular tissue development, and enhanced angiogenesis. They also elevate antioxidant enzyme levels.

Shape : Blue viscous gel form

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Copper tripeptide-1

GANA HA - GREEN

GANA HA TYPE + Chlorophyllin

Patent Application Number
10-2024-0105117

What is Chlorophyllin copper sodium salt

Chlorophyllin copper sodium salt is a naturally derived compound extracted from chlorophyll-containing vegetables.

Shape : Green viscous gel form

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Chlorophyllin copper sodium salt

GANAEYE BOOSTER

GANAEYE BOOSTER

GANAEYE BOOSTER is PDRN concentration solution

What Is PDRN

Polydeoxyribonucleotide is derived from sperm trout through an extraction process. The compounds are able to stimulate Vascular Endothelial Growth Factors and certain receptors in the body that trigger the creation of new artery formation, improves blood flow, and reduces inflammation. Most importantly, PDRN provides the nucleotides necessary for cell regeneration.

In addition to its use for diabetic foot ulcers, PDRN has proven effective in treating PAOD, chronic wounds, hind limb ischemia, osteoarthritis disease, coronary artery disease, and burn injuries.

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Sodium DNA
4	Glutathione

Application

- Face rejuvenation
- Wrinkle removal
- Whitening
- Preventing sagging
- Improving elasticity, turgidity and tonicity of skin
- Repairing damaged dermal cells

Effects by raw material

PDRN

- Help all kinds of wound healing,
- Regeneration of cell and tissue

Glutathione

- Whitening

Cross linked Hyaluronic acid 5mg/cc

- Prevent water loss
- Keep skin moisturized

GANA PHV ESSENCE

GANA PHV ESSENCE

Patent Application Number
10-2024-0105115

What is PLLA

PPoly(L-Lactide) is a biodegradable material with good bio-absorbability and bio-compatibility. After degradation in the body, PLLA products are excreted by metabolism and thus has no harmful side effects to the human body. It is for these reasons that PLLA products are currently widely used in the field of medicine, such as for one-time infusion equipment, medical surgical suture, drug delivery carriers, tissue engineering scaffolds, bone anchors, injectable microcapsules, microspheres, implants, elastomer materials for organ support, etc.

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Poly-L-Lactic Acid

Mechanism

PLLA
(Poly-L-lactic acid)

PLLA →
Immune reaction

Polymer of Lactic acid

PLLA eaten by
macrophage

Lactic acid → CO₂ + H₂O

- By immune reaction
activate fibroblast to
produce collagen

PLLA degradation

1

Random enzymatic degradation

→ Reduction in molecular weight

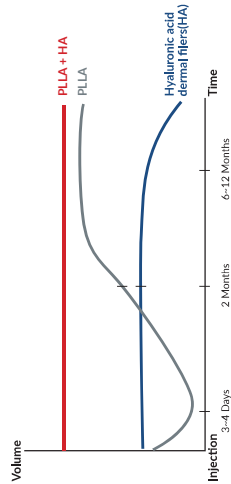

2

Low molecular PLLA phagocytosed by macrophage

The merits of GANA PHV

1. Early and longer volume augmentation over than 2 years by cross linked hyaluronic acid gel and Later volume augmentation by the collagen formation by PLLA.
2. The lower initial swelling by the absence of carboxymethylcellulose.
3. The immediate correction is possible by hyaluronidase.
4. Injected PLLA induce collagen synthesis duration of GANA PHV is much longer than HA fillers.
5. Newly formed collagen prohibit the migration of GANA PHV.

GANA PHV

GANA NPHG

GANA NPHG

Characteristics of GANA NPHG

1. Cross-linked hyaluronic acid
2. Transparent, low viscosity liquid in a vial

What Is Nicotinamide mononucleotide

1. **Anti-aging properties:** NMN can help reduce various age-related changes in the skin by increasing intracellular NAD⁺ levels, which stimulates energy production and activates sirtuin genes.
2. **Improved skin hydration:** Studies have shown that NMN application activates the sirtuin gene and promotes the production of natural moisturizing factors, which may help prevent skin aging.
3. **Reduced melanin production:** In aged melanocytes, NMN treatment showed a marked reduction in melanin production. This effect was also observed in a reconstituted human skin model with aged melanocytes, suggesting potential benefits for aging-related hyperpigmentation.
4. **Metabolic improvements:** Since NAD⁺ is involved in the metabolism of many cells, applying NMN may help improve skin problems associated with disturbed metabolism.
5. **Better absorption:** Cosmetics containing NMN allow for more direct absorption into the skin compared to oral supplements or food sources. Research has shown that when NMN serum is applied to the stratum corneum, the amount of NMN in cells increases approximately 100-fold, while NAD⁺ levels increase about 4-fold.
6. **Potential for improving various skin issues:** NMN's ability to activate sirtuin genes and increase NAD⁺ levels may help address multiple skin concerns simultaneously.

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Nicotinamide Mononucleotide
4	Sodium DNA
5	Glutathione
6	Benzyl Alcohol

GANA EXO NPHG

GANA COSMETIC

GANA EXO NPHG

GANA EXO NPHG

Characteristics of GANA EXO NPHG

1. Cross-linked hyaluronic acid
2. Transparent, low viscosity liquid in a vial

What Is Extracellular vesicles (EVs)?

Extracellular vesicles (EVs) are small lipid membrane-enclosed structures secreted by cells, and among them, EVs with a size of approximately 40 to 100 nm are called exosomes.

What Is Centella?

The leaves and stems of the plant contain ingredients such as maleic acid, asiatic acid, and asiaticoside that help strengthen the skin barrier, protect the skin, and soothe irritation. It also has the power to relieve inflammation and heal wounds such as tumors and ulcers, and as it has been discovered, it is widely used as a raw material for ointments, toothpaste, and cosmetics.

What Is Nicotinamide mononucleotide? (NMN)

1. **Anti-aging properties:** NMN can help reduce various age-related changes in the skin by increasing intracellular NAD+ levels, which stimulates energy production and activates sirtuin genes.
2. **Improved skin hydration:** Studies have shown that NMN application activates the sirtuin gene and promotes the production of natural moisturizing factors, which may help prevent skin aging.
3. **Reduced melanin production:** In aged melanocytes, NMN treatment showed a marked reduction in melanin production. This effect was also observed in a reconstituted human skin model with aged melanocytes, suggesting potential benefits for aging-related hyperpigmentation.
4. **Metabolic improvements:** Since NAD+ is involved in the metabolism of many cells, applying NMN may help improve skin problems associated with disturbed metabolism.
5. **Better absorption:** Cosmetics containing NMN allow for more direct absorption into the skin compared to oral supplements or food sources. Research has shown that when NMN serum is applied to the stratum corneum, the amount of NMN in cells increases approximately 100-fold, while NAD+ levels increase about 4-fold.
6. **Potential for improving various skin issues:** NMN's ability to activate sirtuin genes and increase NAD+ levels may help address multiple skin concerns simultaneously.

Ingredient List

No.	INCI
1	Water
2	Hyaluronic Acid
3	Nicotinamide mononucleotide
4	Centella Asiatica Callus Extracellular Vesicles
5	Sodium DNA
6	Glutathione
7	Benzyl Alcohol

GANA Fish Collagen

GANA Fish Collagen

GANA COSMETIC

GANA Fish Collagen

Characteristics of GANA NPHG

Transparent, low viscosity liquid in a vial

What is Collagen

Collagen is found in connective tissue, skin, tendons, bones, and cartilage. It provides structural support to tissues and plays important roles in cellular processes, including,

- Tissue repair
- Immune response
- Cellular communication
- Cellular migration, a process necessary for tissue maintenance

Collagen efficacy

- Improve skin hydration
- Improve elasticity
- Improve wrinkles

Ingredient List

No.	INCI
1	Collagen
